hostel-booking Manual

for operator

The hostel-booking system is a new B-2-B solution for answering group requests in real time and considerably facilitating bookings.

Profit from the connection of a great number of hostels (see attached list) in all important European cities. Your requests will be answered immediately and independent of agreed allocations.

Hostel-booking suggests only youth group accommodations to you that are suitable for you and presents them to you in a clear way including price comparisons and description of performance so that you can choose much better.

Hostel-booking is a service free of charge that can be operated easily and that helps you in many respects to reduce your work. Apart from an internet access, you do not need any additional software and are thus always able to fall back upon your bookings in the hostel-booking system.

POWER UP YOUR DAILY ROUTINE

Just a login and you can check online availability,
make a booking straight away or just issue an option.
